Welcome to 6DEPLOY-2!

6DEPLOY-2 is a Specific Support Action in the Seventh Framework Programme of the European Union.

The purpose of the 6DEPLOY-2 project is to support the deployment of IPv6 in:

- e-Infrastructure environments
- FP7 projects
- Developing countries (Africa, Latin America, Asia and Eastern Europe)
- Industrial environments in Europe

Partners offer basic training to organisations in Europe and developing countries, and support real IPv6 deployments.

Case studies of installations will be used to gain valuable practical experience which will help the 6DEPLOY-2 team to become the centre of European expertise regarding IPv6 deployment.

IPv6 training labs are being installed worldwide. These are built to a common specification, which allows the 6DEPLOY-2 training course material to be used on them all. It has been shown that these have developed naturally into centres of IPv6 expertise in the countries where they are situated.
